

Summer Stormwater Management Tips

Summer is an important time to manage lawn care, monitor earth disturbances, and maintain proper pool backwashing practices.

Summer Stormwater Tips:

1. To prevent lawns from turning brown during summer droughts, mow less frequently and keep the grass height at least 3 inches tall.
2. When emptying pools, pump to an open area or yard to allow the water to slowly absorb and re-oxygenate.
3. Move the discharge hose several times during pumping to avoid oversaturating one area.
4. Don't pump backwash directly down a hillside or into natural ravines.
