dB(A)

The sound level in decibels, reported as measured by a sound level measuring instrument having an "A" weighting scale. The "A" weighted scale (aka A-weighted scale) is used to measure volume of common residential, commercial, natural and industrial sounds. The level so read is designated dB(A) or dBA.

dB(C)

The sound level, in decibels, reported as measured by a sound level instruments having a "C" weighted scale. The "C" weighted scale (aka C-weighted scale) offers a larger audio frequency range than "A" weighted and is used for measurement of higher volumes, peak volumes, and noises with a large component of low frequency sounds.

DECIBEL (dB)

The practical unit of measurement for sound pressure level; the number of decibels of a measured sound is equal to 20 times the logarithm to the base 10 of the ratio of the sound pressure of the measured sound to the sound pressure of a standard sound (20 micropascals); abbreviated "dB."

Decibel levels (Db) are usually measured on one of two scales, "A" weighted and "C" weighted. "A" weighted.
