

Fall Stormwater Management Tips

Prepare stormwater and flood control systems for increased precipitation and runoff from winter rains and snowmelt.

Fall Stormwater Management Tips:

1. Inspect and Clean Gutters, Downspouts, and Stormwater Systems

Regular maintenance of gutters and downspouts is critical in the fall, especially before heavy rain or snow.

2. Maintain Swales and Stormwater Basins

Ensure that stormwater swales and other flood control features are in good condition.

3. Clear Vegetation from On-Lot Sewage Mounds

Remove woody vegetation growth from on-lot sewage “turkey mounds” and inspect the mound and sewage system for any obvious issues.
