

# Winter Stormwater Management Tips

Winter poses risks of sedimentation from earth-moving activities, flooding from clogged drainage systems, and issues from accumulated pet waste during rain or snowmelt events.

# Winter Stormwater Management Tips:

- Winter can lead to severe flooding and sedimentation events during rains and snowmelt.
- Avoid earth-moving activities during winter.
- It is important to check, report issues, and clear culverts, swales, and stormwater inlets as needed.
- Please pick up after the pets. Waste can accumulate over several months in winter, impacting the quality of local creeks.
